# ENERGY MANAGEMENT

Through to the integration with IDE Straton environment, **Z-TWS4** supports specific communication protocols in the energy applications such as **IEC 60870, IEC 61850**.

About remote management applications, Straton can be integrated with IEC 60870-5-101 and IEC 60870-5-104 Master and Slave.

Moreover with Straton, Z-TWS4 can be an IEC 61850 Server as well as Client so it's able to support functions as **RTU /Gateway, ModBUS RTU -ModBUS TCP conversion, virtual network creation via internet and point-to-point tunnelling**.

Z-TWS4 can be used also with redundant controller for plant automation, energy production control, plants management of renewable energies (biomass, photovoltaic, wind etc.), smart grid developments.

Configurable as web server and as TCP-IP node, Z-TWS4 is open to be integrated in a SCADA/EMS/WEB-based platform.

### STRATON IDE DEVELOPMENT ENVIRONMENT

Straton IDE (Integrated Development Environment) available with tag numbers of 256, 512 and illimitated includes libraries and different tools for fieldbus and I/O channels configuration. The available editor compliant with the IEC 61131-3 standard comprises the following languages: Sequential Function Chart (SFC), Function Block Diagram (FBD), Continuous Function Chart (CFC), Ladder Diagram (LD), Structured Text (ST), Instruction List (IL).

# CPU LINUX-BASED / VIRTUAL MACHINE FOR DATA ACQUISITION AND CONTROL

Z-TWS4 can be utilized by Linux Ubuntu developers for data acquisition applications and control with a development environment, compilation and debug included. With a flash disk support fail safe, Z-TWS4 works as Virtual Machine and industrial PC.

## SUPERVISION

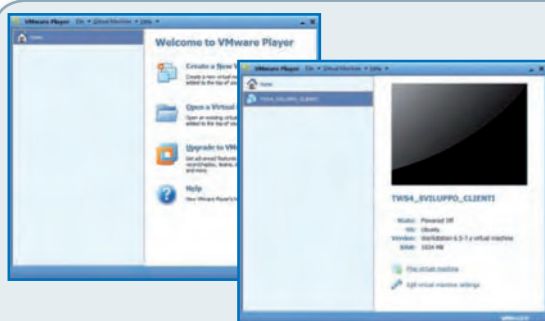

- Tool for a free development
- Independent Virtual machine from other devices and applications
- Resistant to virus, crash and system errors
- High Power Data Management
- Development of Specific drivers
- Primitive Linux for CAN protocol management at low level

## VIRTUAL MACHINE LINUX / UBUNTU

Based on virtual machine with a Linux/Ubuntu operating system, the environment **Seneca Open Development allows to write, compile and debug** code and applications to acquire data and other routine.

Linux gives Z-TWS4 programmable in C through the compiler GNU Compiler Collection (GCC).

Z-TWS4 is in short a virtual machine VMWare with SO Ubuntu ready to use.
